

ZANIER GLOVES HIGHLIGHTS 24 | 25.

Innovation. Mountainpassion. Responsibility.

Tyrol is the ideal place to develop authentic mountain sports equipment. The close cooperation with mountain sports enthusiasts like ourselves constantly opens up new perspectives in product development and is a driving force for innovation. Our partners are the Tyrolean Mountain Rescue Service and the Grossglockner mountain guides, professional freeriders, alpine skiers and snowboarders, alpinists, aviation and cycling athletes. The feedback from many people with a high sensitivity to cold has constantly driven the functionality of our heating models. Last year, the internationally recognized mountain and polar guide and adventurer Christoph Höbenreich set off to explore East Antarctica. He tested our models in katabatic polar storms of over 100 km/h at -20° in areas that hardly anyone had ever seen before. We are grateful for such collaborations. They help us to meet the quality standards to which our brand has been committed since 1969.

Our certification by ClimatePartner since 2019 underlines our commitment to the environment. With natural materials such as Tirolwool® and Loden from Austria and cork, as well as ecological ingredient brands such as Sympatex®, Primaloft® and Polartec®, we set the right course years ago for savings in the product itself. The switch to Gore-Tex ePE membranes and Primaloft® Bio has already been completed in our collection. Markus Zanier, CEO.

DIVERSIFICATION IN ZANIER HEATING TECHNOLOGY.

Back in 1999, ZANIER pioneered the development of the first heated gloves. For over 20 years now, they have enabled people who are sensitive to the cold and even patients with Raynaud's syndrome to enjoy carefree outdoor experiences in winter. Today, ZANIER is transferring the heating technology to other product groups such as HEAT SOCKS. The ZANIER heating socks warm the feet for up to 18 hours with extremely light, small batteries. The heat output is constant and reliable, and the six heating levels can be controlled via a cell phone app. The battery packs have a summer save mode. The heated socks with merino wool content are temperature- and

moisture-regulating with light compression and provide warmth even without battery packs.

INNOVATION IN THE CORE LINE.

Christoph Höbenreich describes his two-man expedition to Antarctica as "heaven and hell at the same time". He gave input for two mountaineering models that provide valuable services to alpinists everywhere. The 40° NORTH mitten combines a knitted fabric made from a virgin wool/polyester blend with soft goatskin on the palm. The mitten is 100% waterproof yet breathable. The multifunctional model can be easily combined with the CORE SHELL, which was developed for this multifunctionality, depending on the area of use and the weather. The overcoat made of waterproof and windproof outer material and sealed seams makes every glove waterproof. The extremely durable, abrasion-resistant material of the palm makes this model an indispensable, extremely robust companion for expeditions and high alpine terrain, with an extra-long snow cuff and carabiner hook.

FLEXIBILITY IN THE SKI MOUNTAINEERING LINE.

Alpinists will be delighted with the ZANIER innovation SYMBIOSE: Robust goatskin leather as the outer material ensures durability and a casual retro look. The FIDLOCK quick-release fastener guarantees a perfect fit and easy donning and doffing, even when moving. The separate, washable liner made of lightweight, breathable and moisture-regulating material provides ideal warmth even in cold, wet weather. Worn solo, the leather glove is an ideal, robust all-season alpine glove.

SYMBIOSE

The OLPERER.TW model is tailored to tactility and function for skimo: Ideal grip feel and compact cut with lightweight, warm and breathable materials. Windproof thanks to blockers and ideally insulated with Primaloft® Bio. Features such as touch function, leash and snap hooks are part of the basic equipment of ZANIER Mountaineering models.

SKI ALPIN PRO - THE ROYAL CLASS WITH FUNCTION.

The all-new RACE-PRO.STX is a sporty alpine ski glove with flexible padding on the backhand and fingers. The glove fits snugly with a neoprene fastener, is waterproof with Sympatex® and practical thanks to the leash and wiper on the thumb. The top model comes in numerous sporty, aggressive color combinations.

RACE-PRO.STX

REVOLUTION.STX provides fun and sense on and off-piste. From this winter, it can already be seen on selected racers in Austria, the USA and England. Generous use of soft goatskin, finished with embossing and padding. Waterproof with ecological SYMPATEX® membrane, insulated with Primaloft® Bio. The combination of leather with 4-way stretch stands for comfort and durability, the LEASH loop is practical in the backcountry and on the slopes.

REVOLUTION.STX

ZANIER LADIES GLOVES.

Sporty fashion look and high comfort - the Zanier Ladies Line has always been known for style and function. In addition, women's gloves require a balance of high insulation with a slim cut, as women tend to be colder than men. With PURE.STX, the product developers in Innsbruck have once again achieved this particularly well: Leather details and minimalist prints make this model timelessly elegant. Comfortable with 4-way stretch and fine goatskin, ecologically warm and dry thanks to Sympatex® and Primaloft® Bio.
